Apply with brush.

Apply with roller.

Apply with sprayer.

- Extends the 'wet edge' of your paint.
- Provides a spray-like finish with roller or brush.
- Eliminates roller marks and common streaking and shadowing problems.
- Improves spray pattern, adding that professional look to your application.
- Extends spray-gun life.
- Provides a smoother, more uniform roller applicataion.
- Container is completely recyclable for easy disposal.
- Excellent for faux finishing.

Floetrol® Acrylic Paint Conditioner

Floetrol improves the performance of acrylics and other water based paint to make it flow like oil paint without the usual clean-up hassles. Floetrol saves money and assures a professional job every time.

Why use Floetrol

Water evaporates - Floetrol does not.

- Floetrol makes more paint and unlike water, Floetrol maintains and fortifies the qualities of good paint.
- Floetrol also improves the coverage of most paints, giving exceptional value for money.
- Floetrol makes acrylics and other water based paint flow and level like oil based paint and enhances the paint's performance in less than ideal conditions.
- Floetrol minimises brush, lap and roller marks, an all too common problem when painting with acrylics, specially in hot or windy weather. Brush clogging is also reduced. With Floetrol, your paint job will look much better with far less effort.
- Floetrol makes cup guns last longer because it lubricates the paint and reduces tip clogging and piston freeze-up, the cause of most cup gun failures. A better spray pattern is achieved with less pressure and the gun doesn't have to work so hard.

The world's leading cup gun makers recommend the use of Floetrol in their spray equipment.

How to use Floetrol

- Make sure the surface is clean and free from dust. Mix paint thoroughly and start painting.
- If the paint drags, pulls or doesn't level properly and the job gets harder and harder, add Floetrol.
- Start by adding 10% and use up to 25%. Let the paint's workability be your guide as to how much Floetrol the paint needs.

TIP:

When spraying with a cup gun and the paint seems to thicken, add a table spoon of water to thin the paint. For more information see the Floetrol container.

Available Sizes:

500ml, 1 litre, 4 litre, 20 litre.

Coverage, clean up and storage

- Floetrol increases coverage of most water based paint. Clean up with soap and water

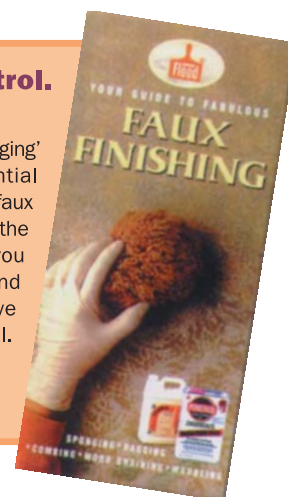

TIP:

- For easy cleaning and longer life, treat your valuable brushes and rollers with 'Brush Stuff' from Flood.
- The Floetrol container is completely recyclable for safe and environmentally friendly disposal.

Faux Finishing and Floetrol. The perfect match.

Whether it's 'marbling', 'sponging', 'ragging' or 'combing', Floetrol is an essential component recommended by leading faux finishing experts because it extends the 'wet edge' of the paint and gives you time to create the look you want and correct the mistakes you may have made. Environmentally friendly disposal.
