

FLOETROL FACT SHEET

Description

Floetrol is a balanced acrylic additive that makes all water based paints, stains and coatings flow like oil based paints. It is transparent white in colour and will not affect the colour of the paint.

Purpose

Floetrol retards the initial rapid setting of acrylic paint films without effecting the overall drying time. Guarantees a longer wet edge, extra flow, better levelling of the paint. *Floetrol* eliminates brush marks and roller tracking.

Application

Add 10 - 15% *Floetrol* into any water based paint. *Floetrol* does not thin paint, but maintains the inherent qualities of the paint.

Drying Time

Floetrol retards drying time of paint by 5 - 7 minutes tack on.

Container Size

Floetrol is available in 500mls, 1, 4 and 20 litre containers.

Coverage

Floetrol greatly increases paint coverage. Adding 1 litre of *Floetrol* to 10 litres of paint will give coverage of 12-13 litres of paint.

Clean-up

Clean equipment with water.

Safety Directions

Use in normal room ventilation. If in eyes, flush eyes with water for 15 minutes. No serious health risks when using *Floetrol*.

Waste Disposal

Dispose of in accordance with local disposal regulations.
